

WT MICROELECTRONICS

**Climate Change
Policy and Advocacy**

Effective July 2020; last updated July 2020

WT believes that global climate change is a serious environmental, economic, and social challenge. By its nature, climate change is a global issue. Addressing climate change requires broad leadership, we actively participate in processes to shape climate policy guided by the following principles. WT is pledging to continue to support the Paris Accord and pursue ambitious climate goals.

Science-based approach. Climate policy should be based upon the latest and best available scientific information. The UN-affiliated Intergovernmental Panel on Climate Change (IPCC) is the primary global source on consensus science on climate change, its causes, and its effects. We follow the lead of IPCC which has called for the 2050 global warming goal to be reduced from 2.0 degrees Celsius to 1.5 degrees Celsius in order to avoid the worst potential impacts of warming.

Meanwhile, WT is a globally leading supplier of channel services for professional electronic components, we also believe in information and communications technology (ICT) has the opportunity to be a significant part of the climate solution by enabling intelligent energy efficiency. ICT has the opportunity to be one of a significant part of the climate solution
